SUMMARY

Senior Frontend Engineer focused on AI products, with 6+ years building scalable web interfaces with React and Next.js. At Carbon Consulting I develop interfaces for enterprise clients on the consulting side; at Beyond Guard I build the interface of the AI security product — from dashboards to live monitoring and logs. Most of my recent work sits where AI meets the interface: agent workflows, streaming responses, approval flows and audit panels. I also design, build and ship my own mobile apps.

EXPERIENCE

Beyond Guard

2024 — Present

Senior Front-End Developer

I develop the interface of Beyond Guard's AI security product: the whole product, from dashboards to live monitoring and log screens.

- Dashboard, live monitoring, request and audit logs; conversation history and role-restricted log details
- Guard modules inspecting LLM, agent, MCP, RAG, file and context traffic, plus an ICAP connector: configuration of prompt-injection, PII and content checks
- Management screens for AI, RAG and content policies, policy groups and the model library
- Red Teaming: scenario and seed lists, CSV/XLSX import, scan flow for RAG targets
- Shadow AI, policy-group-based alerts and SIEM integrations (Syslog, Splunk HEC)
- Organization, user and role management; SSO sign-in and onboarding
- Security hardening: Content-Security-Policy and HTTP security headers, dependency vulnerability remediation, multi-stage Docker image
- Design system and component library for the new interface: 70+ components on Base UI and Tailwind v4, design tokens, light/dark themes, interactive documentation and distribution via a shadcn registry
- BeyondChat: chat application showing Guard check results on every message; real-time streaming over WebSocket with HTTP fallback, file uploads

React · Next.js · TypeScript · Redux Toolkit · Zustand · Material UI · Tailwind CSS · Base UI · Highcharts · React Flow · NextAuth · WebSocket · Docker

Carbon Consulting

Nov 2021 — Present

Senior Front-End Developer

On the consulting side, I develop interfaces for enterprise clients with React and Next.js, with a focus on AI-powered products.

- Front-end architecture and UI/UX development for enterprise clients including Turkcell, Akbank and Vakıf Katılım
- Expert consultancy for Vakıf Katılım's Artifin application
- Vakıf Katılım Artifin Inspection: interface of an internal-audit application that generates risk control matrices, regulation analyses and exams with AI agents — step-by-step progress, approval workflows, document upload and OCR, and an assistant streaming answers over SSE
- Front-end lead on in-house products from concept to release
- AI-assisted development to speed up code generation and design prototyping

SELECTED CLIENT PROJECTS

Akbank — Treasury Monitoring. Comprehensive monitoring platform for treasury risk; rapid prototyping with AI tools. Next.js · Redux Toolkit · Highcharts · Material UI

Turkcell — TBot Analytics. Analytics dashboards for the TBot chatbot platform. React · Redux · Highcharts

Carbonetz. End-to-end UI/UX design and development of a green-transformation application. Next.js · NextAuth · Highcharts · Figma

Epiuse Chat. Real-time chatbot supporting both WebSocket and REST, with secure authentication. Next.js · NextAuth · WebSocket

Glosa. Web application built from scratch with modern React patterns. React · Context API

Oley.com

Sep 2020 – Apr 2021

Full Stack Developer

- Developed and maintained Oley.com platforms with Django (backend) and Angular (frontend)
- Improved performance through better backend–frontend integration; UX and interface design

INDEPENDENT PRODUCTS

Yelken: Kelime Oyunu & Bulmaca — Word game, puzzle and language-learning app for Android and iOS: 11,000+ words in Turkish, English and Spanish, spaced repetition, offline play, online leaderboards and real-time duels. Designed, built and published solo. React Native · Expo · TypeScript · SQLite · Supabase

Kurultay — Hero-controlled base defence and migration game set on the steppe; all 3D models, UI art and audio are generated from code; weekly leaderboard with Google and Apple sign-in. Unity 6 · C# · URP · Supabase

Freelance websites — Evde Gelişim (online learning platform), Turklerden, DiasNDT, AAT Hukuk. Next.js · React · Django

SKILLS

Front-end React, Next.js, TypeScript, JavaScript, Redux Toolkit, Zustand, NextAuth, Tailwind CSS, Material UI, Base UI, React Flow

AI interfaces Vercel AI SDK, CopilotKit, AG-UI, SSE, WebSocket, prompt engineering

Data visualization Highcharts, Recharts, D3.js, Three.js

Mobile & games React Native, Expo, Unity, C#, Supabase, SQLite

Back-end & tooling Node.js, Express, Python, Django, REST, Docker, Linux, Git, GitHub Actions, n8n

Design & process Figma, Canva, Agile, Trello, ClickUp, Taiga

CORE COMPETENCIES

UI architecture Scalable, maintainable front-end architectures and design systems

Performance Best practices for web application performance

Collaboration Working closely with design, back-end and product teams

Consulting Technical expertise and solutions for enterprise clients

AI-assisted development Faster delivery and prototyping with AI tools

Problem solving Turning complex requirements into workable technical solutions

EDUCATION

B.Sc. Computer Engineering — İzmir University of Economics 2017 – 2021

Associate Degree, Computer Programming — İzmir University of Economics 2014 – 2016

WRITING

Articles on AI interfaces, React and Next.js at medium.com/@cmracar — including “Migrating from manual SSE handling to the Vercel AI SDK” (2026), “AG-UI protocol: CopilotKit and SSE integration flow” (2025) and “Generative UI and CopilotKit” (2025).

LANGUAGES

Turkish native · **English** professional working proficiency
